Distance Estimation Task Analysis

p-value 0.03163 *

Group	Percent Correct (%)
RANDOM	50%
DIURNAL	51.7%
NOCTURNAL	58.7%

There was a statistically significant difference between the mean percent accuracy in between the Diurnal and the Nocturnal Group

Navigation Task Percent Accuracy Analysis

p-value 0.009 *

Group	Percent Correct (%)
RANDOM	35.6%
DIURNAL	52.7%
NOCTURNAL	58.8%

The Nocturnal Group had a statistically significantly greater average percent accuracy compared to the Diurnal Group.

Navigation Task Steps Per Trial (Trial-by-Trial) Analysis

Trial Number	Random (Steps Per Trial (n))	Diurnal (Steps Per Trial (n))	Nocturnal (Steps Per Trial (n))
1	~15	~12	~11
2	~18	~20	~11
3	~23	~18	~9
4	~25	~23	~13
5	~38	~24	~18

Participants in the Nocturnal Group performed with lower average number of steps to the target node for each trial of Navigation (Trial 1-5)

Cumulative Navigation Task Steps Per Trial Analysis

p-value 0.01

Group	Steps Per Trial (n)
RANDOM	23 steps
DIURNAL	19 steps
NOCTURNAL	12 steps

The Nocturnal Group performed with a statistically significant average lower number of steps to the target compared to the Diurnal Group.

First evidence outside-of-lab-environment on a mass scale on the positive role of sleep – associated with replay – in memory consolidation for general abstract cognitive tasks
